Cholera report for the week ended August 16, 1902.

MANILA, P. I., *August 28, 1902.*

SIR: I have the honor to transmit herewith cholera report for the Philippine Islands for the week ended August 16, 1902. During this period little, if any, change has taken place. The disease remains about stationary in Manila, and continues to spread in the provinces from the causes already cited.

Respectfully,

J. C. PERRY,
Passed Assistant Surgeon,
Chief Quarantine Officer for the Philippine Islands.

The SURGEON-GENERAL.

[Inclosures.]

Cholera report for the week ended August 23, 1902.

MANILA, P. I., *September 4, 1902.*

SIR: I have the honor to hereby submit report of cholera in the Philippine Islands for the week ended August 23, 1902. The disease remains about stationary in Manila and continues severe in the provinces. During this period two important centers, Aparri and Iloilo, have become infected. Aparri, in the extreme northern part of the island of Luzon, is the outlet of Cagayan Valley, consequently a spread of the disease in this populous and fertile district is to be expected. The other place of importance, Iloilo, is on the island of Panay. The disease was brought to this town by bancas from the adjacent island of Negros.

Respectfully,

J. C. PERRY,
Passed Assistant Surgeon,
Chief Quarantine Officer for the Philippine Islands.

The SURGEON-GENERAL.

[Inclosures.]
